Why use Western's Molded Fiber Nursery Containers?

Western's containers provide a better growing environment than plastic containers. They insulate against heat, are breathable, and facilitate a more effective watering routine.

Can they be planted pot 'n all?

Most bare root trees and shrubs grown in Western's containers can also be planted "pot 'n all". Healthy soil and moisture are required for the proper breakdown of molded fiber containers when planted pot 'n all.

What kind of recycled paper does Western use?

Western uses a blend of post-consumer newsprint and pre-consumer corrugated box scraps in our manufacturing process.

Where are they made?

Western's containers are made in our factory in Corvallis Oregon.

How do I buy/find Western's containers?

Western's nursery containers are available nationwide through a network of authorized distributors. Contact us for more information.

Founded in 1958, Western Pulp continues today as the industry's leading manufacturer of molded fiber products.

Family owned and operated, our team is ready to assist you in finding the perfect nursery containers for you and your customers.

We manufacture the highest quality products in the business and take pride in servicing our customers in every way possible.
